SOFTWARE ENGINEER

SUMMARY

Frontend-focused Software Engineer with experience across React.js, Next.js, and Expo (React Native), currently working on internal CakePHP-based systems at Wahana Makmur Sejati. Built and shipped multiple production platforms independently, including a Next.js hotel reservation system for SMK Edotel and an Android app (Semanggi) using Expo SDK 56 and Supabase. Top 10 Finalist, Jagoan Hosting Infrastructure Competition 2025.

EXPERIENCE

Wahana Makmur Sejati

Junior Website Developer

June 2026 - Present

- Build and maintain internal business systems on a 5-person engineering team, using CakePHP and JavaScript against a centralized database shared across multiple company applications.
- Authored and documented the team's internal coding standards, now applied consistently across 2 current projects.
- Integrated REST API endpoints across multiple internal modules using asynchronous JavaScript (AJAX/fetch), replacing full-page reloads with dynamic partial updates for faster form submission and data retrieval.

PROJECTS

Semanggi

(github.com/manage-kontrakan)

Android Developer

June 2026 - Present

- Built and shipped a production Android app for shared-household operations — cleaning rotations, guest logging, monthly bill splitting, and house rules — in daily use by 5 residents since June 2026.
- Architected and delivered the full stack solo: Expo SDK 56 with expo-ui/Jetpack Compose for native Android UI, and Supabase for Postgres, authentication, and row-level access control.
- Chose native Jetpack Compose over cross-platform UI components for native Material 3 behavior, accepting Android-only scope as a deliberate trade-off for a user base entirely on Android.
- Replaced a manual spreadsheet-and-group-chat workflow with in-app bill splitting and payment tracking, running continuously since launch with no data loss.

Myedotel Project

(myedotel.id)

Front-End Developer

January 2026 - February 2026

- Built the full frontend of Myedotel, a Next.js hotel reservation platform unifying around 10 SMK Edotel locations across East Java into a single booking system.
- Handled select backend responsibilities in addition to full frontend ownership, bridging gaps across the stack where needed.
- Delivered a user-facing platform featuring hotel browsing, room availability checking, direct reservation flow, and an interactive Virtual Tour feature.
- Platform was officially launched and inaugurated at Expo Expose SMK Jawa Timur in February 2026, presided over by the Governor of East Java.

SMK Telkom Malang Project (Infra Competition)

Front-End Developer, Copywriter

August 2025 - November 2025

- Built the frontend for SMK Telkom Malang's competition entry, placing Top 10 Finalist out of around 300 teams at the Jagoan Hosting Infrastructure Competition 2025.
- Integrated the Meta Graph API to fetch and render live posts from the school's official Instagram alongside Moklet user content.
- Wrote all site copy to school brand guidelines and shipped fully responsive layouts across mobile and desktop.

Telkom Society Project

(telkom-society.smktelkom-mlg.sch.id)

Lead Front-End Developer

November 2024 - February 2025

- Led frontend development for a LinkedIn-style professional network serving hundreds of SMK Telkom Malang students and staff.
- Built profiles, connections, and the activity feed, owning component structure and state across the platform.

E-Pilketos Project

(e-pilketos.moklet.org)

Front-End Developer

July 2024 - October 2024

- Designed and built the landing page for E-Pilketos, delivering a responsive, modern UI used by around 1500 student voters.
- Built the admin dashboard/interface, handling data views, user interactions, and overall frontend logic to support event operations.
- Collaborated with the MPK (student council organization) during the election day as an on-site technical assistant, ensuring the platform ran smoothly, guiding users, and resolving any issues in real time.

LICENSES & CERTIFICATIONS

- IT Specialist: JavaScript Developer
- HackerRank: JavaScript (Intermediate), Node.js (Intermediate), Front-End Developer (React).

SKILLS

Languages: JavaScript, TypeScript, PHP, HTML, CSS

Frameworks: React.js, Next.js, Expo (React Native), Expo UI, CakePHP

Tools: Supabase, PostgreSQL, Git, REST APIs, Node.js, Docker, CI/CD, Tailwind CSS, Figma
